### Constituents and additives

### Effect on the substrate

Slightly decomposed raised-bog peat (white peat)	increases the air capacity and improves the structural stability					
Strongly decomposed raised-bog peat (black peat)	increases the water holding capacity and improves the water uptake					
Florafibre	improves the air capacity, the drainage and the structural stability. The surface of the substrate dries out faster					
Lime (Calcium carbonate)	adapts perfectly the pH-value to the specific requirements of the plants					
Top-Quality compound fertilizer	supplies the plants immediately with all macro and micro-nutriens					
Micro-nutrient fertilizer	supplies the plants additionally with: Mg, B, Cu, Mn, Mo, Fe and Zn					
Wetting agent Instant plus	improves the water uptake of the substrate, particulary of the dry material					

## Advice:

The product should be stored in a dry and cool place and protected against direct sunlight. Our advice would be to use up the product as soon as possible. When stored for a longer period of time, the product should be analyzed before it is used. The product has received the RAL quality label according to the regulations of the Gütegemeinschaft Substrate für Pflanzen e.V. (German Quality Assurance Association Growing Media for Plant Cultivation). If questions occur, please get in touch with your contact person or the technical department of horticulture at Floragard (Tel. +49 441 2092-0).
