

Stay Surefooted This Winter

With cooler weather just around the corner it's important you're stocked up on quality de-icer this winter.

Based on powerful de-icing technology developed for the aviation industry, OMEX's Surefoot de-icer is a high performance liquid solution for use on footpaths and public thoroughfares, or any situation where ice poses a risk to pedestrians and users.

It works by immediately starting to melt the ice once applied, unlike solid de-icers which need to dissolve in water before becoming active.

Why Surefoot?

Simple To Handle - and easy to store. Any unused de-icer can be poured back into the drum and stored indefinitely.

Non-Corrosive- unlike salt, Surefoot is effectively non-corrosive.

Lower Temperatures - Surefoot maintains effective ice control to lower temperatures than salt, remaining active down to temperatures as low as -50°C , salt is generally in-effective below -7°C .

Fast Acting - rapidly penetrates the snowpack/ice, allowing easy removal by brushing and shovelling. Surefoot remains on the surface and inhibits further ice formation.

Hard Surfaces/Grass - safe to be used on both, with no unwanted residue.

Timings and Rates

For Ice Prevention

15ml per square metre

Expecting Light Snow (1-2cm)

30ml per square metre

For clearing established ice

60ml per square metre and repeat until ice is controlled

For clearing compacted snow

Remove as much snow as possible mechanically then apply 75 ml per square metre

Speak to your OMEX technical manager for full recommendations

Pack Size

Surefoot is available in:

- * 10L
- * 20L
- * 1000L IBC
